Tool #6: Kennel Blindness

1. Kennel blindness is the inability of breeders to recognize faults in their own dogs.

2. Because serious faults can be seen in a couple of generations, if unchecked, kennel blindness can destroy a breeding program.

3. Kennel blind people tend to focus on negative features in dogs other than their own.

4. People who don't have an "eye" for a dog are prone to kennel blindness.

5. To help cure kennel blindness, work with a knowledgeable and honest mentor.
